

Programming the Universe: A Quantum Computer Scientist Takes on the Cosmos

By Seth Lloyd

Programming the Universe: A Quantum Computer Scientist Takes on the Cosmos By Seth Lloyd

Is the universe actually a giant quantum computer? According to Seth Lloyd, the answer is yes.

All interactions between particles in the universe, Lloyd explains, convey not only energy but also information—in other words, particles not only collide, they compute. What is the entire universe computing, ultimately? “Its own dynamical evolution,” he says. “As the computation proceeds, reality unfolds.” *Programming the Universe*, a wonderfully accessible book, presents an original and compelling vision of reality, revealing our world in an entirely new light.

Editorial Review

From Publishers Weekly

Lloyd, a professor at MIT, works in the vanguard of research in quantum computing: using the quantum mechanical properties of atoms as a computer. He contends that the universe itself is one big quantum computer producing what we see around us, and ourselves, as it runs a cosmic program. According to Lloyd, once we understand the laws of physics completely, we will be able to use small-scale quantum computing to understand the universe completely as well. In his scenario, the universe is processing information. The second law of thermodynamics (disorder increases) is all about information, and Lloyd spends much of the book explaining how quantum processes convey information. The creation of the universe itself involved information processing: random fluctuations in the quantum foam, like a random number generator in a computer program, produced higher-density areas, then matter, stars, galaxies and life. Lloyd's hypothesis bears important implications for the red-hot evolution-versus-intelligent design debate, since he argues that divine intervention isn't necessary to produce complexity and life. Unfortunately, he rushes through what should be the climax of his argument. Nevertheless, Lloyd throws out many fascinating ideas. (For another take on information theory, see *Decoding the Universe* on p.53.) 12 b&w illus.

Starred Review Lloyd's specialty in physics is the hot topic of quantum information. And his book may do for quantum information what Brian Greene did for strings (*The Elegant Universe*, 1999) and Stephen Hawking did for spacetime (*A Brief History of Time*, 1988): popularize a far-out scientific frontier. Will Lloyd's listeners have the same head-scratching reactions as his MIT students do on their first encounter with the idea that information is a quantifiable physical value, as much as mass or motion? Or with the proposition that any physical system--a river, you, the universe--is a quantum mechanical computer? Not if they've read his book, which offers brilliantly clarifying explanations of the "bit," the smallest unit of information; how bits change their state; and how changes-of-state can be registered on atoms via quantum-mechanical qualities such as "spin" and "superposition." Putting readers in the know about quantum computation, Lloyd then informs them that it may well be the answer to physicists' search for a unified theory of everything. Exploring big questions in accessible, comprehensive fashion, Lloyd's work is of vital importance to the general-science audience. *Gilbert Taylor*

Review

"Lloyd is one of the gurus of quantum and information theory, and in this accessible book he presents an insightful new perspective on the cosmos."—Sir Martin Rees, University of Cambridge "What an astonishing book! Lloyd is at the forefront of a revolution." —Kevin Kelly, Editor-at-Large, *Wired* "Lloyd thinks he has found a new way to explain one of the most basic questions in science: Why is the world so complex? . . . Fascinating and profoundly comforting. . . . Seth Lloyd certainly gives his readers a lot of bang for their buck."—*The New York Times Book Review* "Renowned for his innovative conflation of pure physics and computation, Lloyd is well positioned to hack his way into space-time and come back with answers." —*Seed*

From reader reviews:

Annette Puente:

In this 21st century, people become competitive in most way. By being competitive now, people have do something to make these survives, being in the middle of the particular crowded place and notice by means of surrounding. One thing that sometimes many people have underestimated the item for a while is reading. That's why, by reading a guide your ability to survive increase then having chance to remain than other is high. For you personally who want to start reading the book, we give you this specific Programming the Universe: A Quantum Computer Scientist Takes on the Cosmos book as basic and daily reading reserve. Why, because this book is greater than just a book.

Sharon Novick:

People live in this new time of lifestyle always try and and must have the spare time or they will get lot of stress from both daily life and work. So , once we ask do people have spare time, we will say absolutely without a doubt. People is human not just a robot. Then we ask again, what kind of activity do you have when the spare time coming to anyone of course your answer will probably unlimited right. Then do you try this one, reading textbooks. It can be your alternative inside spending your spare time, the actual book you have read is usually Programming the Universe: A Quantum Computer Scientist Takes on the Cosmos.

Joseph Vest:

Playing with family inside a park, coming to see the marine world or hanging out with good friends is thing that usually you could have done when you have spare time, subsequently why you don't try thing that really opposite from that. Just one activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Programming the Universe: A Quantum Computer Scientist Takes on the Cosmos, you are able to enjoy both. It is fine combination right, you still would like to miss it? What kind of hangout type is it? Oh can happen its mind hangout fellas. What? Still don't obtain it, oh come on its referred to as reading friends.

Tom Baptist:

Do you like reading a reserve? Confuse to looking for your selected book? Or your book had been rare? Why so many problem for the book? But just about any people feel that they enjoy to get reading. Some people likes reading through, not only science book but additionally novel and Programming the Universe: A Quantum Computer Scientist Takes on the Cosmos or even others sources were given knowledge for you. After you know how the good a book, you feel want to read more and more. Science publication was created for teacher as well as students especially. Those books are helping them to bring their knowledge. In other case, beside science guide, any other book likes Programming the Universe: A Quantum Computer Scientist Takes on the Cosmos to make your spare time a lot more colorful. Many types of book like this one.
