Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach (Psychological Issues)

By Leon Hoffman, Timothy Rice, Tracy Prout

Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach offers a new, short term psychotherapeutic approach to working dynamically with children who suffer from irritability, oppositional defiance and disruptiveness. *RFP-C* enables clinicians to help by addressing and detailing how the child's externalizing behaviors have meaning which they can convey to the child. Using clinical examples throughout, Hoffman, Rice and Prout demonstrate that in many dysregulated children, *RFP-C* can:

- Achieve symptomatic improvement and developmental maturation as a result of gains in the ability to tolerate and metabolize painful emotions, by addressing the crucial underlying emotional component.
- Diminish the child's use of aggression as the main coping device by allowing painful emotions to be mastered more effectively.
- Help to systematically address avoidance mechanisms, talking to the child about how their disruptive behavior helps them avoid painful emotions.
- Facilitate development of an awareness that painful emotions do not have to be so vigorously warded off, allowing the child to reach this implicit awareness within the relationship with the clinician, which can then be expanded to life situations at home and at school.

This handbook is the first to provide a manualized, short-term dynamic approach to the externalizing behaviors of childhood, offering organizing framework and detailed descriptions of the processes involved in *RFP-C*. Supplying clinicians with a systematic individual psychotherapy as an alternative or complement to PMT, CBT and psychotropic medication, it also shifts focus away from simply helping parents manage their children's misbehaviors. Significantly, the approach shows that clinical work with these children is compatible with understanding the children's brain functioning, and posits that contemporary affect-oriented conceptualizations of defense mechanisms are theoretically similar to the neuroscience construct of implicit emotion regulation, promoting an interface

between psychodynamics and contemporary academic psychiatry and psychology.

Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach is a comprehensive tool capable of application at all levels of professional training, offering a new approach for psychoanalysts, child and adolescent counselors, psychotherapists and mental health clinicians in fields including social work, psychology and psychiatry.

Editorial Review

Review

This book gives readers a bird's eye view into the organized and focused thought processes of the experienced psychodynamic clinician in handling children with disruptive behavior disorders. As such, this is a novel book and a must-read for clinicians who work with children, as it provides a systematic, operationalized, comprehensive treatment approach that is radically different from the ubiquitous cognitive behavioral approach. It is essential that these core treatment techniques, articulated so well in this Manual, not get lost amid ever-narrowing treatments that are regularly imparted to clinicians who work with children. - **Barbara Milrod, MD**, Professor of Psychiatry, Weill Cornell Medical College, An expert in clinical trials in anxiety disorders in adults and children.

This book addresses one of the most important issues of our modern times – how do children and adolescents learn to regulate their emotions and behaviors. The intervention presented in this book has its basis in psychodynamic principles, especially defense mechanisms. It focuses on the emotional underpinnings of behavioral disruptions especially the avoidance of and reaction to painful emotions. There is meaning in the child's behaviors, emotions, and communications. The clinician learns to understand this and communicates that understanding to the child and parents. This is done in a systematic, manualized manner which enables the child to better tolerate and deal with the unpleasant emotions. This wedding of psychodynamic principles into a systematized, clear, and manualized approach is what makes this book so imaginative and modern in its approach to a very serious problem facing children, parents, mental health clinicians, and society. - **John D O'Brien, MD**, Clinical Professor, Training Director, Child/Adolescent Psychiatry Residency Program Icahn School of Medicine at Mount Sinai.

This book is of such scope it must be considered a magnum opus for the field of child clinical psychology and psychiatry. It is a unique blend of review of the most recent research on externalizing behavior in children, of the underlying neuroscientific features of the disorder and the most concise summary of psychoanalytic concepts related to the treatment of the disorder. There is no book quite like this one available. As a resource for teaching it is unique in its direct, and clear writing style which make so accessible the psychotherapeutic techniques necessary for treating these often challenging cases. The book is more than a manual on delivering Regulation-Focused Psychotherapy for Children with Externalizing Behaviors, it is a manual on treating children with difficulties in regulating their affect in general and therefore is a 'must have' for every child clinician. - **Miriam Steele, PhD**, Professor of Psychology, Director of Clinical Training, New School for Social Research, Author of "Clinical Applications of the Adult Attachment Interview" Routledge, 2008.

This is a timely, masterful, comprehensive contribution to the sparse literature on Externalizing Disorders (ODD or DD). The authors provide rich examples from their clinical experience which will be of great value to all who treat children with aggressive behavior disorders. A must for child psychotherapists who wish to treat externalizing behavior disorders effectively. The authors provide an incredibly creative procedure that incorporates basic principles of psychodynamic treatments with findings from the affective neurosciences, developmental, and cognitive psychology and yet goes beyond. RFT goes beyond CBT because it gets at the

underlying emotional component, promotes maturation of emotional regulation and removes roadblocks to normal development. The authors get to the heart of the problem by highlighting the centrality of addressing painful emotions and maladaptive ways which children and adolescents have of avoiding and protecting themselves. Careful attention to how to approach such problems in an experience near way as well as how to work with parents makes this a most comprehensive treatment approach, including a termination and evaluative process that lead to the development of protective measures that are adaptive and life changing. -

Wendy Olesker, PhD, Training and Supervising Analyst at NYPSI and on the Faculty at the NYU Postdoctoral Program in Psychoanalysis and Psychotherapy.

[This] manual is a must-read for experienced clinicians as well as novices to the profession. For many readers, it will provide a new therapeutic approach. For others, it will illuminate what might be expected as treatment unfold while, for other readers, it will challenge their current practice. RFP-C is an innovation certain to be empirically tested, discussed, and adapted to meet changing guidelines and attitudes... Considering all the achievements of the manual, not the least is the extension of psychoanalytic concepts to the design of a short-term intervention model... For the science of psychoanalysis RFP-C opens new doors for empirical exploration. - **Saralea Chazan, PhD**, *Jouranal of Infant, Child, and Adolescent Psychotherapy*

About the Author

Leon Hoffman, MD, is a child and adolescent psychiatrist and psychoanalyst, and is currently the director of the Pacella Parent Child Center at the New York Psychoanalytic Society and Institute, and Chief Psychiatrist at West End Day School.

Timothy Rice, MD, is assistant professor of psychiatry at the Icahn School of Medicine at Mount Sinai, New York City.

Tracy Prout, PhD, is assistant professor of psychology in the combined school-child clinical doctoral program at the Ferkauf Graduate School of Psychology at Yeshiva University. She is also in private practice working with children, adolescents, adults, and families.

Users Review

From reader reviews:

Michael Coffman:

In this age globalization it is important to someone to find information. The information will make a professional understand the condition of the world. The condition of the world makes the information better to share. You can find a lot of personal references to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher this print many kinds of book. Often the book that recommended to you personally is Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach (Psychological Issues) this reserve consist a lot of the information in the condition of this world now. This kind of book was represented how can the world has grown up. The language styles that writer make usage of to explain it is easy to understand. The particular writer made some research when he makes this book. That's why this book suited all of you.

Gabriel Reed:

You can get this Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach (Psychological Issues) by check out the bookstore or Mall. Only viewing or reviewing it may to be your solve trouble if you get difficulties on your knowledge. Kinds of this book are various. Not only by written or printed but additionally can you enjoy this book simply by e-book. In the modern era including now, you just looking because of your mobile phone and searching what their problem. Right now, choose your current ways to get more information about your e-book. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose suitable ways for you.

Paul Williams:

That guide can make you to feel relax. This particular book Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach (Psychological Issues) was colorful and of course has pictures on there. As we know that book Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach (Psychological Issues) has many kinds or category. Start from kids until teenagers. For example Naruto or Investigator Conan you can read and think that you are the character on there. So , not at all of book usually are make you bored, any it can make you feel happy, fun and chill out. Try to choose the best book for yourself and try to like reading in which.

Barbara Folsom:

What is your hobby? Have you heard that question when you got college students? We believe that that query was given by teacher to their students. Many kinds of hobby, Every person has different hobby. Therefore you know that little person similar to reading or as reading through become their hobby. You have to know that reading is very important in addition to book as to be the point. Book is important thing to incorporate you knowledge, except your personal teacher or lecturer. You get good news or update with regards to something by book. A substantial number of sorts of books that can you take to be your object. One of them are these claims Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach (Psychological Issues).
