The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition) From Psychology Press

Since the late 1800s psychologists have been interested in discerning the strategies subjects employ to solve psychological tests (Piaget, 1928, Werner, 1940, Gesell, 1941). Much of this work, however, has relied on qualitative observations. In the 1970s, Edith Kaplan adopted this approach to the analysis of standardized neuropsychological measures. Unlike her predecessors, Dr. Kaplan and her colleagues emphasized the application of modern behavioral neurology to the analysis of the test data. Her approach was later termed the Boston Process Approach to neuropsychological assessment.

While Edith Kaplan's work generates a great deal of enthusiasm, the qualitative nature of her analyses did not allow for its adoption by mainstream neuropsychologists. However, in recent years this limitation has begun to be addressed. Clinicians and researchers have developed new methodologies for quantifying the Boston Process Approach, leading to the emergence of a new field, which is collectively termed the Quantified Process Approach.

Quantified Process Approach to Neuropsychological Assessment outlines the rationale for the emergence of this new approach and reviews the state of the art research literature and up to date clinical applications as they pertain to the evaluation of neuropsychiatric, head injured, and learning disabled patients. When available, norms and scoring forms are included in the appendices.

Editorial Review

Review

'This book is a valuable resource for clinicians and researchers in the field of neuropsychology. It provides information that will help to transform the process approach from an observational method to an empirically validated methodology. It gives new meaning to the distinction between 'quantitative' and 'qualitative' techniques for evaluating brain-behavior relationships.' - William B. Barr, Chief of Neuropsychology, Comprehensive Epilepsy Center, New York University School of Medicine

Users Review

From reader reviews:

Leslie Marcellus:

With other case, little people like to read book The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition). You can choose the best book if you love reading a book. Given that we know about how is important any book The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition). You can add understanding and of course you can around the world by a book. Absolutely right, due to the fact from book you can recognize everything! From your country until finally foreign or abroad you will be known. About simple factor until wonderful thing it is possible to know that. In this era, you can open a book as well as searching by internet unit. It is called e-book. You should use it when you feel bored stiff to go to the library. Let's read.

Barbara Taylor:
