Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world By Tom Igoe

Make microcontrollers, PCs, servers, and smartphones talk to each other.

Building electronic projects that interact with the physical world is good fun. But when the devices you've built start to talk to each other, things really get interesting. With 33 easy-to-build projects, *Making Things Talk* shows you how to get your gadgets to communicate with you and your environment. It's perfect for people with little technical training but a lot of interest.

Maybe you're a science teacher who wants to show students how to monitor the weather in several locations at once. Or a sculptor looking to stage a room of choreographed mechanical sculptures. In this expanded edition, you'll learn how to form networks of smart devices that share data and respond to commands.

- Call your home thermostat with a smartphone and change the temperature.
- Create your own game controllers that communicate over a network.
- Use ZigBee, Bluetooth, Infrared, and plain old radio to transmit sensor data wirelessly.
- Work with Arduino 1.0, Processing, and PHP—three easy-to-use, open source environments.
- Write programs to send data across the Internet, based on physical activity in your home, office, or backyard.

Whether you want to connect simple home sensors to the Internet, or create a device that can interact wirelessly with other gadgets, this book explains exactly what you need.

Editorial Review

About the Author

Tom Igoe teaches courses in physical computing and networking, exploring ways to allow digital technologies to sense and respond to a wider range of human physical expression. He has a background in theatre, and his work centers on physical interaction related to live performance and public space. He is a co-author of the book *Physical Computing: Sensing and Controlling the Physical World with Computers*, which has been adopted by numerous digital art and design programs around the world. Projects include a series of networked banquet table centerpieces and musical instruments; an email clock; and a series of interactive dioramas, created in collaboration with M.R. Petit. He has consulted for The American Museum of the Moving Image, EAR Studio, Diller + Scofidio Architects, Eos Orchestra, and others.

Users Review

From reader reviews:

Lanita Hill:

Inside other case, little men and women like to read book Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world. You can choose the best book if you'd prefer reading a book. So long as we know about how is important a book Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world. You can add know-how and of course you can around the world by just a book. Absolutely right, due to the fact from book you can understand everything! From your country until eventually foreign or abroad you can be known. About simple factor until wonderful thing you are able to know that. In this era, we can open a book or even searching by internet device. It is called e-book. You need to use it when you feel bored stiff to go to the library. Let's learn.

Luis Martin:

This book untitled Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world to be one of several books that will best seller in this year, honestly, that is because when you read this book you can get a lot of benefit into it. You will easily to buy this kind of book in the book retail outlet or you can order it by using online. The publisher in this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Touch screen phone. So there is no reason to your account to past this e-book from your list.

Donald Lewis:

Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world can be one of your basic books that are good idea. We recommend that straight away because this guide has good vocabulary that could increase your knowledge in words, easy to understand, bit entertaining but delivering

the information. The writer giving his/her effort to place every word into satisfaction arrangement in writing Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world but doesn't forget the main point, giving the reader the hottest in addition to based confirm resource info that maybe you can be one of it. This great information may drawn you into fresh stage of crucial contemplating.

Kirk Nutter:

This Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world is brand new way for you who has attention to look for some information as it relief your hunger of information. Getting deeper you on it getting knowledge more you know or you who still having small amount of digest in reading this Making Things Talk: Using Sensors, Networks, and Arduino to see, hear, and feel your world can be the light food for yourself because the information inside that book is easy to get by means of anyone. These books develop itself in the form that is reachable by anyone, yes I mean in the e-book type. People who think that in publication form make them feel drowsy even dizzy this publication is the answer. So you cannot find any in reading a publication especially this one. You can find what you are looking for. It should be here for you. So , don't miss this! Just read this e-book type for your better life and also knowledge.
