Green Roof Plants: A Resource and Planting Guide By Edmund C. Snodgrass, Lucie L. Snodgrass

In just a few years, green roofs have gone from a horticultural curiosity to a booming growth industry-primarily because the environmental benefits of extensively planted roofs are now beyond dispute, whether for industrial or governmental complexes or for private homes in urban or suburban settings. Despite the high level of interest in green roofs, until now there has been no reliable reference devoted exclusively to the various species of drought-tolerant plants that are suitable for use on extensive green roofs. Green Roof Plants fills that void. The book contains photographs and cultural information for more than 200 species and cultivars of plants, including valuable data on moisture needs, heat tolerance, hardiness, bloom color, foliage characteristics, and height. Concise, accurate, and easy to use, this book is destined to become an indispensable practical reference guide, not just for architects, landscape designers, engineers, and environmentalists, but also for environmentally conscious home gardeners.

Editorial Review

From [Booklist](#)

Although relatively commonplace in Japan and throughout Europe, green roof gardening is just a grassroots movement in the U.S. But ecological and economic concerns are pushing what was once a landscaping anomaly into the forefront of environmental design. It is, however, not as simple as merely re-creating a ground-level garden high atop a building. Green roof gardening must take into consideration structural engineering issues such as load bearing, waterproofing, insulation, drainage, and maintenance. These same concerns make selecting suitable plant material a challenge. The authors have compiled the first reference tool designed to help green roof gardeners determine the best drought-tolerant, low-maintenance, temperature-hardy plants. Supported by 300-plus color photographs and including cultural details on more than 200 species and cultivars, this is an essential resource for home gardeners and landscape architects and designers looking for environmentally friendly choices. *Carol Haggas*
