Automated Biometrics: Technologies and Systems (The International Series on Asian Studies in Computer and Information Science)

By David D. Zhang

Automated Biometrics: Technologies and Systems (The International Series on Asian Studies in Computer and Information Science) By David D. Zhang

Biometrics-based authentication and identification are emerging as the most reliable method to authenticate and identify individuals. Biometrics requires that the person to be identified be physically present at the point-of-identification and relies on `something which you are or you do' to provide better security, increased efficiency, and improved accuracy. Automated biometrics deals with physiological or behavioral characteristics such as fingerprints, signature, palmprint, iris, hand, voice and face that can be used to authenticate a person's identity or establish an identity from a database. With rapid progress in electronic and Internet commerce, there is also a growing need to authenticate the identity of a person for secure transaction processing.

Designing an automated biometrics system to handle large population identification, accuracy and reliability of authentication are challenging tasks. Currently, there are over ten different biometrics systems that are either widely used or under development. Some automated biometrics, such as fingerprint identification and speaker verification, have received considerable attention over the past 25 years, and some issues like face recognition and iris-based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications. However, very few books are exclusively devoted to such issues of automated biometrics.

Automated Biometrics: Technologies and Systems systematically introduces the technologies and systems, and explores how to design the corresponding systems with in-depth discussion. The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security.

Editorial Review

Users Review

From reader reviews:

George Cardenas:

Have you spare time for a day? What do you do when you have far more or little spare time? That's why, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a wander, shopping, or went to the particular Mall. How about open as well as read a book allowed Automated Biometrics: Technologies and Systems (The International Series on Asian Studies in Computer and Information Science)? Maybe it is for being best activity for you. You understand beside you can spend your time using your favorite's book, you can better than before. Do you agree with it has the opinion or you have other opinion?

Tamara Evans:

Book is actually written, printed, or descriptive for everything. You can learn everything you want by a e-book. Book has a different type. We all know that that book is important thing to bring us around the world. Next to that you can your reading proficiency was fluently. A guide Automated Biometrics: Technologies and Systems (The International Series on Asian Studies in Computer and Information Science) will make you to be smarter. You can feel much more confidence if you can know about anything. But some of you think in which open or reading a book make you bored. It is far from make you fun. Why they are often thought like that? Have you trying to find best book or suited book with you?

William Farley:

Information is provisions for folks to get better life, information presently can get by anyone from everywhere. The information can be a expertise or any news even restricted. What people must be consider if those information which is from the former life are hard to be find than now's taking seriously which one would work to believe or which one often the resource are convinced. If you have the unstable resource then you obtain it as your main information there will be huge disadvantage for you. All of those possibilities will not happen within you if you take Automated Biometrics: Technologies and Systems (The International Series on Asian Studies in Computer and Information Science) as your daily resource information.

Ian Bracy:

The reserve with title Automated Biometrics: Technologies and Systems (The International Series on Asian Studies in Computer and Information Science) posesses a lot of information that you can find out it. You can get a lot of gain after read this book. This book exist new know-how the information that exist in this book

represented the condition of the world at this point. That is important to yo7u to find out how the improvement of the world. This kind of book will bring you throughout new era of the glowbal growth. You can read the e-book on your smart phone, so you can read the item anywhere you want.
