
Essential Cybersecurity Science: Build, Test, and Evaluate Secure Systems

By Josiah Dykstra

Essential Cybersecurity Science: Build, Test, and Evaluate Secure Systems
By Josiah Dykstra

If you’re involved in cybersecurity as a software developer, forensic investigator, or network administrator, this practical guide shows you how to apply the scientific method when assessing techniques for protecting your information systems. You’ll learn how to conduct scientific experiments on everyday tools and procedures, whether you’re evaluating corporate security systems, testing your own security product, or looking for bugs in a mobile game.

Once author Josiah Dykstra gets you up to speed on the scientific method, he helps you focus on standalone, domain-specific topics, such as cryptography, malware analysis, and system security engineering. The latter chapters include practical case studies that demonstrate how to use available tools to conduct domain-specific scientific experiments.

- Learn the steps necessary to conduct scientific experiments in cybersecurity
- Explore fuzzing to test how your software handles various inputs
- Measure the performance of the Snort intrusion detection system
- Locate malicious “needles in a haystack” in your network and IT environment
- Evaluate cryptography design and application in IoT products
- Conduct an experiment to identify relationships between similar malware binaries
- Understand system-level security requirements for enterprise networks and web services

Essential Cybersecurity Science: Build, Test, and Evaluate Secure Systems By Josiah Dykstra Bibliography

- Sales Rank: #801746 in Books
- Brand: imusti
- Published on: 2016-01-01
- Original language: English
- Number of items: 1
- Dimensions: 9.17" h x .40" w x 7.01" l, .0 pounds
- Binding: Paperback
- 190 pages

Editorial Review

Review
"Dykstra surprises readers by showing that the security of software artifacts can be the subject of scientific study." -Vint Cerf, Internet Pioneer

"An invaluable resource on the application of the scientific method for any cyber security practitioner." - Matt Georgy, Senior Technical Director, Symantec Corporation

About the Author

Dr. Josiah Dykstra is a Senior Researcher at the Department of Defense. Dykstra received his PhD in Computer Science from the University of Maryland, Baltimore County, researching the technical and legal challenges of digital forensics for cloud computing. He is known in the DoD and forensics communities for his work on network security, intrusion detection, malware analysis, digital forensics, and cloud computing. He is a member of the ACM, IEEE, American Academy of Forensic Sciences, Cloud Security Alliance, and American Bar Association.

Users Review

From reader reviews:

Patrina Eaton:

Information is provisions for anyone to get better life, information currently can get by anyone at everywhere. The information can be a expertise or any news even a huge concern. What people must be consider any time those information which is from the former life are hard to be find than now could be taking seriously which one is suitable to believe or which one typically the resource are convinced. If you get the unstable resource then you have it as your main information we will see huge disadvantage for you. All those possibilities will not happen with you if you take Essential Cybersecurity Science: Build, Test, and Evaluate Secure Systems as your daily resource information.

Marianne Guzman:

People live in this new day time of lifestyle always make an effort to and must have the extra time or they will get large amount of stress from both day to day life and work. So , once we ask do people have time, we will say absolutely of course. People is human not just a robot. Then we inquire again, what kind of activity have you got when the spare time coming to you actually of course your answer will probably unlimited right. Then do you try this one, reading textbooks. It can be your alternative in spending your spare time, often the book you have read will be Essential Cybersecurity Science: Build, Test, and Evaluate Secure Systems.

Juan Dishon:

A lot of book has printed but it is different. You can get it by world wide web on social media. You can choose the very best book for you, science, amusing, novel, or whatever through searching from it. It is known as of book Essential Cybersecurity Science: Build, Test, and Evaluate Secure Systems. You can add your knowledge by it. Without making the printed book, it can add your knowledge and make anyone happier to read. It is most essential that, you must aware about e-book. It can bring you from one spot to other place.

Pearl Miller:

Reading a publication make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is written or printed or descriptive from each source that filled update of news. Within this modern era like at this point, many ways to get information are available for anyone. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just looking for the Essential Cybersecurity Science: Build, Test, and Evaluate Secure Systems when you desired it?
